BMC Pregnancy and Childbirth

ERRATUM

Open Access

Erratum to: Maternal intake of seafood and supplementary long chain n-3 poly-unsaturated fatty acids and preterm delivery

Anne Lise Brantsæter[1*], Linda Englund-Ögge[2], Margareta Haugen[1], Bryndis Eva Birgisdottir[3], Helle Katrine Knutsen[1], Verena Sengpiel[2], Ronny Myhre[4], Jan Alexander[5], Roy M. Nilsen[6], Bo Jacobsson[4,7] and Helle Margrete Meltzer[1]

Erratum

In the original publication of this article [1], the categories for lean and fatty fish in Fig. 2 should have been listed as servings per week and not per day. Please see updated figure below.

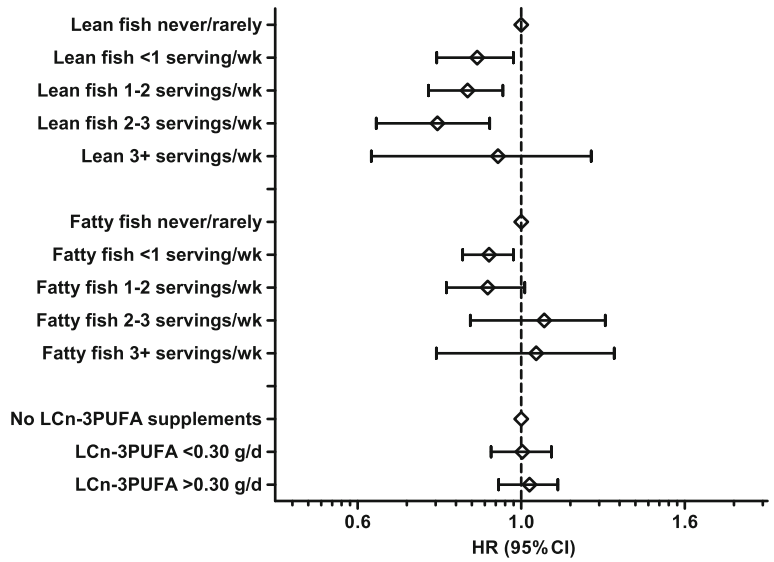

Fig. 2 Associations (hazard ratio (HR) and 95% confidence intervals (CI)) between intakes of lean fish, fatty fish and marine long chain n-3 polyunsaturated fatty acids (LCn-3PUFA) from supplements and preterm delivery. Intakes are mutually adjusted and adjusted for maternal age, pre-pregnancy BMI, height, parity, energy intake, maternal education, smoking, marital status, household income and previous preterm delivery. *N* = 67,007 women in the Norwegian Mother and Child Cohort Study (MoBa) 2002–2008
